

# Intra-Campus Management

## AutoScheduler Intelligent Warehouse Orchestration

### Why It's Important

- **Complex business needs often lead shippers to create campuses with unique process flows.**
- **Many campuses have multiple buildings.**
  - » Production + finished goods
  - » Raw material + production + finished goods
  - » Main DC + overflow
  - » Production + finished goods + overflow
- **Optimizing inventory, receipts, transfers, and customer shipments across multiple buildings on campus with the appropriate timing is challenging and often incurs massive costs.**

### Value

- AutoScheduler optimizes inventory across buildings, manages all intra-campus transfers (even of raw materials to production), and relocates receipts and shipments to minimize inventory touches and improve total site throughput.
- Each fully-loaded inventory transfer costs between \$150 and \$500 when factoring in loading, unloading, and putaway costs. A reduction in transfers saves millions of dollars and a priceless number of planner headaches at large, complex sites.
- AutoScheduler is a bolt-on software to existing ERP and WMS, taking your operation to the next level.

### Why It's So Cool

Smart companies like P&G, who saved \$4M at a single site, can now balance work across campus and avoid overwhelming challenges and hidden costs. Take your campus operation to the next level, rather than continuing old school operations with a lot of elbow grease, numerous managers, and multiple disparate software systems. The secret is tying together all intra-campus operations to orchestrate activities. The secret is AutoScheduler to optimize any campus for success.
